Section 1.0 Introduction

The Central Valley Energy Center, LLC (CVEC LLC) submitted an Application for Certification (AFC) for the Central Valley Energy Center to the California Energy Commission (CEC) for a 1060-megawatt (MW) combined-cycle natural gas-fired power plant on October 31, 2001. On November 26, 2001, the CEC staff issued a letter recommending the AFC be declared data inadequate in several technical areas. This document responds to the Commission staff's request for additional data. The responses are submitted based on the technical disciplines identified by the CEC and are in response to those items identified in the Data Adequacy Worksheets (attached to the Commission's November 26, 2001 letter) where the Commission staff indicated adequate data was not provided.

Section 2.0 Data Adequacy Responses

As stated above, CVEC LLC is providing the additional data required for a data adequacy determination by the Commission based on the Data Adequacy Worksheets provided with the Commission's November 26, 2001 letter.
